Chinonso Jesse Okoronkwo

Software Engineer

London, UK | +44 7454 616116 | chinonsojacobs@gmail.com | www.linkedin.com/in/chinonso-okoronkwo

Summary

Analytical and results-driven professional with strong passion and knowledge of crafting innovative and robust solutions to improve processes. Expert in software development/engineering, process/system improvement, testing, programming, database designing, and coding. Adept at collaborating with other key software professionals, to structure, optimise data delivery, and re-design infrastructure for greater scalability. Proficient in various programming languages, including Node.JS, Java, and JavaScript with keen eye for detail in writing clean and efficient code. Adept at developing scalable web applications, APIs, and database systems, leveraging cutting-edge technologies like Node.js, React, and MongoDB. Innate ability to perform software QA, procedure improvement, and manual/automated testing with excellent debugging skills.

Work experience

MITA Games, Lagos, NG **2020-12 - 2022-02**

Software Engineer

Lagos State, Nigeria

In the role of a software engineer at MITA Games, I had the privilege of being actively engaged in the development of the gaming website associated with "Legends of Mitra" built with a predominantly Node.js codebase.

- Effectively collaborated with a multidisciplinary team of engineers and designers to implement novel features and enhance the overall user experience of the Legends of Mitra gaming website.
- Coordinated closely with the backend development team to ensure seamless data synchronization and real-time updates between the website and game servers.
- Gained substantial experience in the identification and resolution of technical issues through thorough debugging and troubleshooting efforts, whether conducted independently or as part of a collaborative undertaking.
- Actively contributed to documentation and knowledge-sharing efforts, thereby ensuring accessibility to best practices and technical insights for the entire team.

Freelance (Self employed), Lagos, NG **2020-01 - 2020-12**

Software Engineer

Lagos State, Nigeria

Spearheaded development of robust API's by using Node.js and MongoDB, precisely tailored to exceed client requirements for increasing efficiency and user satisfaction. Streamlined and optimised backend applications through extensive codebase refactoring and rigorous testing for improved performance, reduced bugs, and enhanced system reliability.

- Successfully completed numerous contract jobs, entrusted by diverse companies to deliver top-notch solutions and met strict deadlines, whilst surpassing expectations.
- Deployed cutting-edge software projects by leveraging JavaScript and JAVA for seamless functionality and enhanced user experience in close collaboration with clients.

Education

Middlesex University **- 2023-01**

Bachelor of Science

Middlesex University

Bachelor of Science - BS, Information Technology and Business Information Systems * (2023)

APTECH **- 2021-01**

APTECH Computer Education

Advanced Diploma, Computer Software Engineering * (2021)

Skills

Node.JS	**Javascript**
JAVA	**AWS (Amazon Web Services)**
MongoDB	**ReactJS**
MySQL	**Object Oriented Programming**
Jest	**Agile**
REST API	**Test Driven Development**

Key Projects

- **Product Order API - GitHub**
  Designed and developed dynamic API by using JavaScript (Node.js) and MongoDB, whilst enabling seamless CRUD operations on products and streamlined management of orders through Full-stack technologies knowledge.
- **Real Time Chat Room - GitHub**
  Engineered and deployed high-impact Chat Room application by utilising WebSocket and socket.io technologies for real-time message relays between individuals.
- **Blood Bank JAVA application**
  Developed highly efficient Blood Bank application by leveraging JAVA and MySQL to empower seamless CRUD operations on donors, whilst streamlining search functionality with specific parameters and robust login and signup options.
- **Online Hotel Booking and Reservations Website**
  Created an Online Hotel Booking/Reservation System (Website) that can organise and operate the actions involved in hotel booking and reservation in a dependable, cost-effective, and organised manner with the full capabilities like keeping track of customer data, following a simple straightforward booking process, display hotel locations, rooms, prices and check room availability.
